NFPA 130 Compliant Patch Cords
A Plug and Play Solution!

NFPA 130 compliant patch cords, using HUB-Link® communications cables, are a plug and play solution that ensures reliable connections between critical equipment in transit systems to help keep passengers safe. Supporting contractors, installers and engineers, these patch cords are pre-assembled and pre-tested to save time and labor during installation.

BENEFITS

- Pre-assembled patch cords eliminate field assembly, which saves time and labor and reduces scrap.
- Pre-tested prior to shipment, reducing time and labor during installation. Test results available upon request.
- Meets NFPA 130 providing a safe and quality product.
- Custom configurations to meet specific project needs.
- Value added service in addition to bulk cable needs.

APPLICATIONS

Designed for use in transit environments, these patch cords maintain connections between essential equipment to provide reliable signals and communications, ensuring the safety of passengers. HUB-Link® cables typically support public address systems, camera circuits, electronic signage, transit control rooms, bungalow electronics equipment, and more.
